Solution Requirements (Functional & Non-functional)

Date	16 October 2022
Team ID	PNT2022TMID21554
Project Name	ANALYSIS OF HOSPITAL'S HEALTH
	CARE DATA
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement	Sub Requirement (Story / Sub-Task)
	(Epic)	
FR-1	Appointments	 Appointments and scheduling the available time slots in a regular basis. Showing the number of appointments on given day. After login asking ID and phone number to avoid any issues. Generating appointment. Appointment Status: a. Pending b. Confirmed c. Cancelled; No Reschedule d. Cancelled; Reschedule e. No Show f. Completed
FR-2	Clinical Care	 The admission of the patient must be examined properly and patients who comes in a critical position should be given immediate treatment. Enhanced and improved reliability on reporting the data. Access medication history from external sources. Predict the length of stay of inpatients.

FR-3	Bed requirements	Analyzing and monitoring of beds which
		are required are the most important task.

		Using flawless systems for accurately tracking the availability of beds.
	Bed requirements Patient Records	 A Proper record or documentations need to be maintained regarding the patients who all consulted and detailed analysis of their health details. Accessible as Standalone function, as well as easily accessible from Progress Note and Evaluation activities. Digital records will be more efficient and time saving.
FR-5	Providing insights of dataset	 Raw data collection and sharing of data and systems are essential factors in hospital management. According to these data in appropriate measures can be taken. Providing data set without human error.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Reliability	Understanding the current trend and working on to it to solve the problem in an efficient manner.
		 Being software as a service, HMS is highly resilient to any technology disruptions, downtime, or crashes experienced by other technology systems.
NFR-2	Security	Patient identification :
		To recognize
		and analyze the
		patient perfectly.

NFR-3	Usability	➤ Usable systems are straightforward to use by as many people as possible, both in case of either end users or administrators to view the hospital records when needed.
NFR-4	Performance	Response time: > Providing acknowledgment in minimal time about the patient information. Comfortability: > To ensure that the guidelines and accessibilities are followed.
NFR-5	Availability	 Better coordination with the hospital management to provide all its resources accessible when needed. Accessibility of all medical facilities.
NFR-6	Scalability	Make sure that the work is done in more efficient way with the appropriate resources.
